

King Air 90/100/200/B200/250 LED Upgrade

46% Weight Reduction
Per Fixture

40% Lower System
Operating
Temperatures

30% Reduction
in Operating Current

ADVANTAGES:

- Uses existing aircraft wire harness and On/Off Dim Switch
- Reduced EMI emissions
- 3.2 lbs. in weight savings
- Up to 100,000 hour life
- No high voltage
- Reduced EMI

LED LIGHTING INTERIOR UPGRADE

The King Air upgrade for the 90s, 100s, 200s, B200s and 250 is the result of cutting-edge innovation and superior technology. This LED upgrade features reduced weight and lower current draw while also increasing the life span and reliability of the lighting system. The upgrade fits easily in the fluorescent lighting housing while adding the bonus of being much quieter and much more energy efficient than cold cathode fluorescents. This LED upgrade offers comfortable ambient cabin lighting while also being cost effective over the life of the aircraft.
