ADVANTAGES:

- Low Operating Temperature
- 100,000 Hours of Life
- Uses about 87% less Power than an Incandescent Bulb
- Operates Below 10V in Emergency Situations
- Approved in More than 50 Different Aircraft
- Global Dealers Available

LED LIGHTING INTERIOR UPGRADE

PWI's LED replacement reading light is a brighter and more efficient alternative to incandescent bulbs. LED lights also provide 100,000 hours of life which means PWI reading lights might be the last reading light your aircraft will need. LED lights are cool to the touch and give off almost no heat. They also operate on significantly less power and are more cost-efficient over the life of the aircraft. PWI lights can be easily and quickly installed in a variety of models including piston, turboprop, and jet aircraft. Purchase PWI LED lights and never again worry about installing another reading light.
