- Greater than 90% Power Savings
- Operates Below 10V in Emergency Situations
- Approved in More than 50 Different Aircraft
- Global Dealers

Call or email for additional information on compatibility of reading lights with specific models of aircraft.

LED LIGHTING INTERIOR UPGRADE

PWI's LED replacement reading light provides 100,000 hours of life, which means our LED lights might be the last reading lights your aircraft will need. LED lights are also a brighter and more efficient alternative to incandescent bulbs. PWI's lights are cool to the touch and give off almost no heat. They also operate on significantly less power and are more cost-efficient over the life of the aircraft. PWI lights can be easily and quickly installed in a variety of models including piston, turboprop, and jet aircraft. Purchase PWI LED lights and never again worry about installing another reading light.
