

# King Air B200/250 LED Upgrade

100k Hours of Life

30% Reduction in  
Operating Current

3.2lbs in Weight Savings

## ADVANTAGES:

- Uses Existing Wire Harness and On/Off/Dim Switch
- Reduced EMI Emissions
- No High Voltage
- 40% Lower System Operating Temperatures
- Eliminates the Buzzing of Fluorescent Lighting

## LED LIGHTING INTERIOR UPGRADE

The B200/250 is the preference of discerning aircraft owners, as it offers an outstanding combination of speed, durability, performance and comfort. Consequently PWI's King Air B200/250 upgrade offers superior lighting options for a preeminent aircraft. The PWI upgrade replaces fluorescent lighting while maintaining the positive characteristics of fluorescents. This LED upgrade features reduced weight and lower current draw while also increasing the life span and reliability of the lighting system. The PWI upgrade fits easily in the fluorescent lighting housing while adding the bonus of being much quieter and much more energy efficient than fluorescents. This LED upgrade offers comfortable ambient cabin lighting while also being cost effective over the life of the aircraft. PWI's B200/250 upgrade is the superior choice for a superior aircraft.
