

LED LINEAR LIGHT

▶ Variable Dimming

▶ 100K Hours of Life

▶ Seamless Lighting Appearance

ADVANTAGES:

- Custom Designed System
- Keep Factory Wiring
- Eliminate Need for Power Supplies
- Cooler Operating Temperature
- No EMI or RFI
- Less Expensive Over the Life of the Aircraft
- 261 Lumens Per Foot
- 1 inch Increments Available

LED LIGHTING INTERIOR UPGRADE

PWI's LED Linear Light is a complete LED lighting system that replaces all older fluorescent cabin lights. PWI's LED Linear Light provides brilliant, uninterrupted light for most every area of the aircraft. This functional and attractive system needs only minimal power to provide ample light and variable dimming for the entire cabin. This lightweight LED light also features three different directional installation options: upwash, downwash and direct light, with no buzzing and no flickering. The Linear Light is available in increments as small as 1 inch. The Linear Light illuminates areas including the cabin, glareshield, cargo bay, galley and lavatory. PWI's Linear Light is housed in an aluminum channel, featuring a frosted lens to better diffuse light more evenly, giving long strips of PWI LED lighting a uniform and seamless appearance. Choose PWI's LED Linear Light and ensure a unique and elegant cabin lighting environment.

Be BRILLIANT
