- No Impact to Aircraft Interior
- Eliminates Fluorescent Buzz
- No High Voltage
- Uses Existing On/Off/Dimmer

LED LIGHTING INTERIOR UPGRADE

This STC-approved 300 series King Air LED upgrade is more energy-efficient than fluorescent lighting, lasts longer, as well as saving you money over the life of the aircraft.

The LEDs install into the same locations as the fluorescent lights and are a fit, form and function direct replacement. The kit features LEDs with the correct wiring connectors for a no-solder installation.

PWI offers two color temperature options. Choose from Warm White at 4100K and Cool White at 5100K – which is whiter. These LEDs use the aircraft dimming controls.
