B300 Series, 350 Series; 1900 Series

Pilatus
PC-12 Series, PC-12-45 Series and PC-12-47 Series

LED LIGHTING INTERIOR UPGRADE

Freshen up your aircraft interior with PWI's LED No Smoking/Seat Belt sign light.

The new LED upgrade is a direct replacement for the factory-installed Teledyne Part #1202-300 sign lights.

By removing the stock light boards, the PWI LED upgrade is installed using the factory mounting holes and requires no changes to the fixture. This LED works up to 100,000 hours with reduced power consumption. Cooler operating temperatures mean you're not likely to ever need to replace these lights. This two board LED upgrade kit replaces the two original bulb boards and is powered by 28 volts from the aircraft.

PWI's No Smoking/Fasten Seat Belt Graphic can be paired with our LED No Smoking/Fasten Seat Belt light to refresh the entire sign. Renew the look of your King Air, 1900, or Pilatus cabin with PWI's LED No Smoking/Seat Belt light sign upgrade.
