

LEAR 60/60XR LED CABIN LIGHTS

ADVANTAGES:

- Replace all Fluorescent Lights and Power Supplies
- 5,000K Cool White
- 100,000 Service Hour LEDs
- 28 Volt Powered – No Inverters
- Very Low Power Draw
- No Hum, Buzz, or Light Flicker

INTERIOR UPGRADE

PWI recreates the feeling of a new Lear 60 cabin with modern LED downwash lighting.

Replace all of the original fluorescent cabin lights with PMA-approved LEDs. That means no more power inverters either. In fact, no maintenance at all is required.

Installation is less stressful because the LEDs use the original fluorescent light wiring.

Fluorescents are replaced with new same-length LEDs. PWI LEDs use the dimming controls already in the aircraft or a third-party cabin management system.

No complicated apps to download, learn and update.
