- STC Documentation Included
- Eliminates Fluorescent Buzz
- No High Voltage
- Uses Existing Bright/Dim/Off Controls
- 3 Year Warranty

LED LIGHTING INTERIOR UPGRADE

This STC-approved 300 series King Air LED upgrade is more energy-efficient than fluorescent lighting, lasts longer, and saves money over the life of the aircraft.

The LEDs install into the same locations as the fluorescent lights and are a fit, form and function direct replacement. The system features the correct connectors for a plug and play installation.

PWI offers two color temperature options: Warm White at 4100K and Cool White at 5100K.

These LEDs use the original aircraft dimming controls.
